Art Unit: 2834

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 23-28, drawn to an ultrasonic transducer array with piezoelectric elements, classified in class 310, subclass 334.
- II. Claims 1-22, drawn to a method of manufacturing a piezoelectric device, classified in class 29, subclass 25.35.

The inventions are distinct, each from the other because:

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the piezoelectric device of Group I can be made by methods other than those of Group II, e.g. each bar could be formed individually rather than being cut from a common plate, or the metal (electrode) layers could be provided after cutting a common plate into bars.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
